

How to get your own EVE Exploration Google spreadsheet awesomeness

by

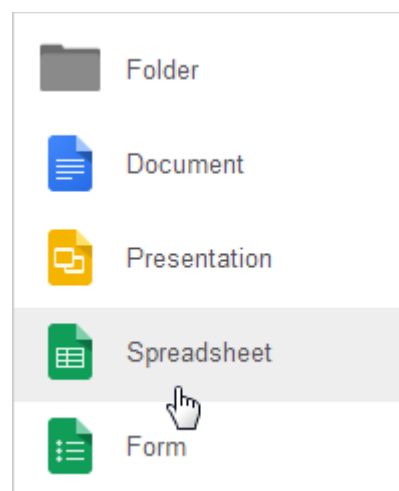

Grunschick

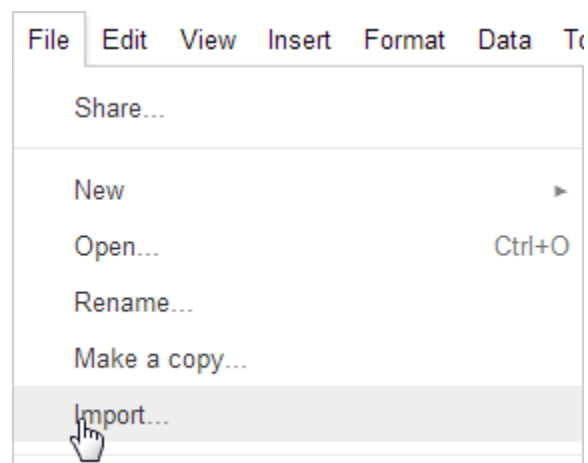

1. If you are merely updating your EVE Exploration Google spreadsheet, please follow the instructions in **How to update your EVE Exploration Google spreadsheet to the latest version.pdf** instead.
2. Go to Google Drive (<https://drive.google.com/>) in a web browser.
3. Click on the **Create** button:

4. Click on **Spreadsheet**:

5. In the newly created Google spreadsheet, choose **File → Import...** in the menu:

6. In the **Import file** window that pops up, select **Replace spreadsheet** and click on the **Choose File** button:

Import file

Upload file
Supported formats: .xls, .xlsx, .ods, .csv, .txt, .tsv, .tab

Choose File No file chosen

Import action

- ☐ Create new spreadsheet
- ☐ Insert new sheet(s)
- ☒ Replace spreadsheet
- ☐ Replace current sheet
- ☐ Append rows to current sheet
- ☐ Replace data starting at the selected cell

Preview

No file uploaded or preview not supported for this file type

Import **Cancel** All data currently in this spreadsheet will be replaced.

7. Select the file **EVE Exploration.ods** somewhere on your hard drive, USB drive or whatever storage the file is on, open it and click on the **Import** button:

Import file

Upload file
Supported formats: .xls, .xlsx, .ods, .csv, .txt, .tsv, .tab

Choose File EVE Exploration.ods

Import action

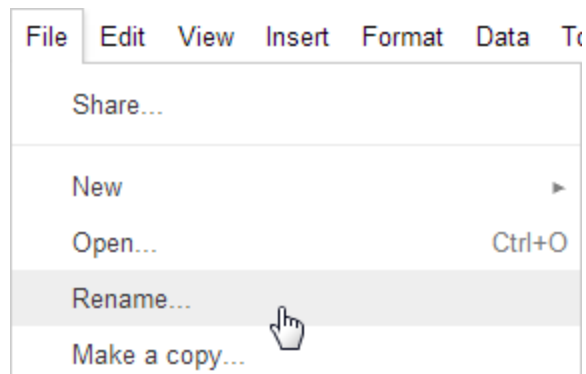

- ☐ Create new spreadsheet
- ☐ Insert new sheet(s)
- ☒ Replace spreadsheet
- ☐ Replace current sheet
- ☐ Append rows to current sheet
- ☐ Replace data starting at the selected cell

Preview

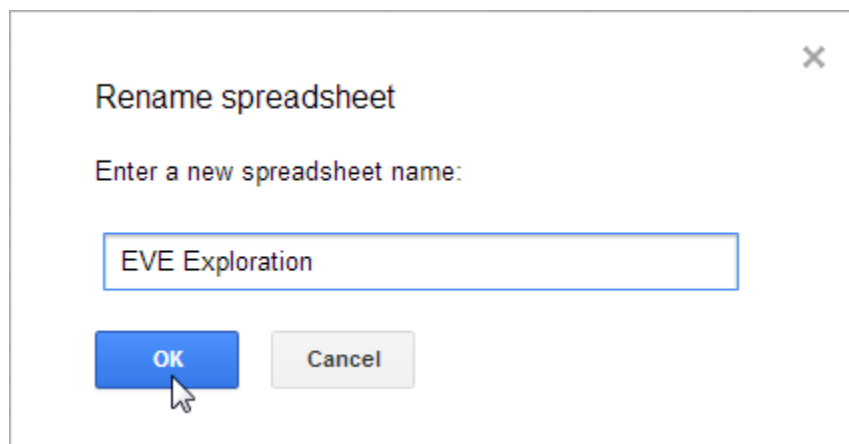

No file uploaded or preview not supported for this file type

Import **Cancel** All data currently in this spreadsheet will be replaced.

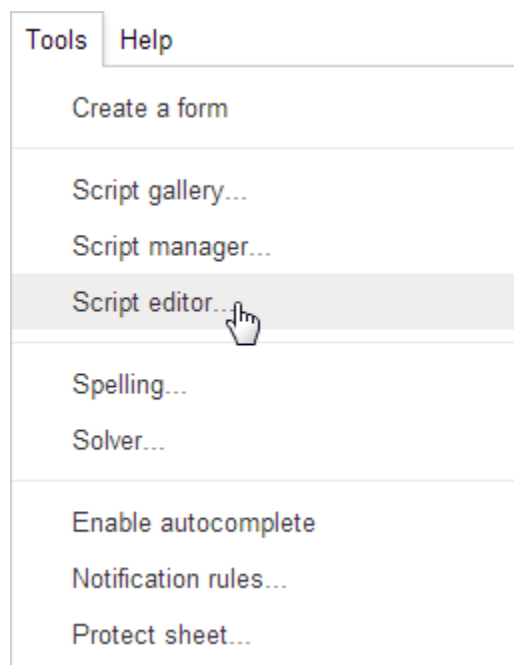

8. After the file is imported, choose **File → Rename...** in the menu:

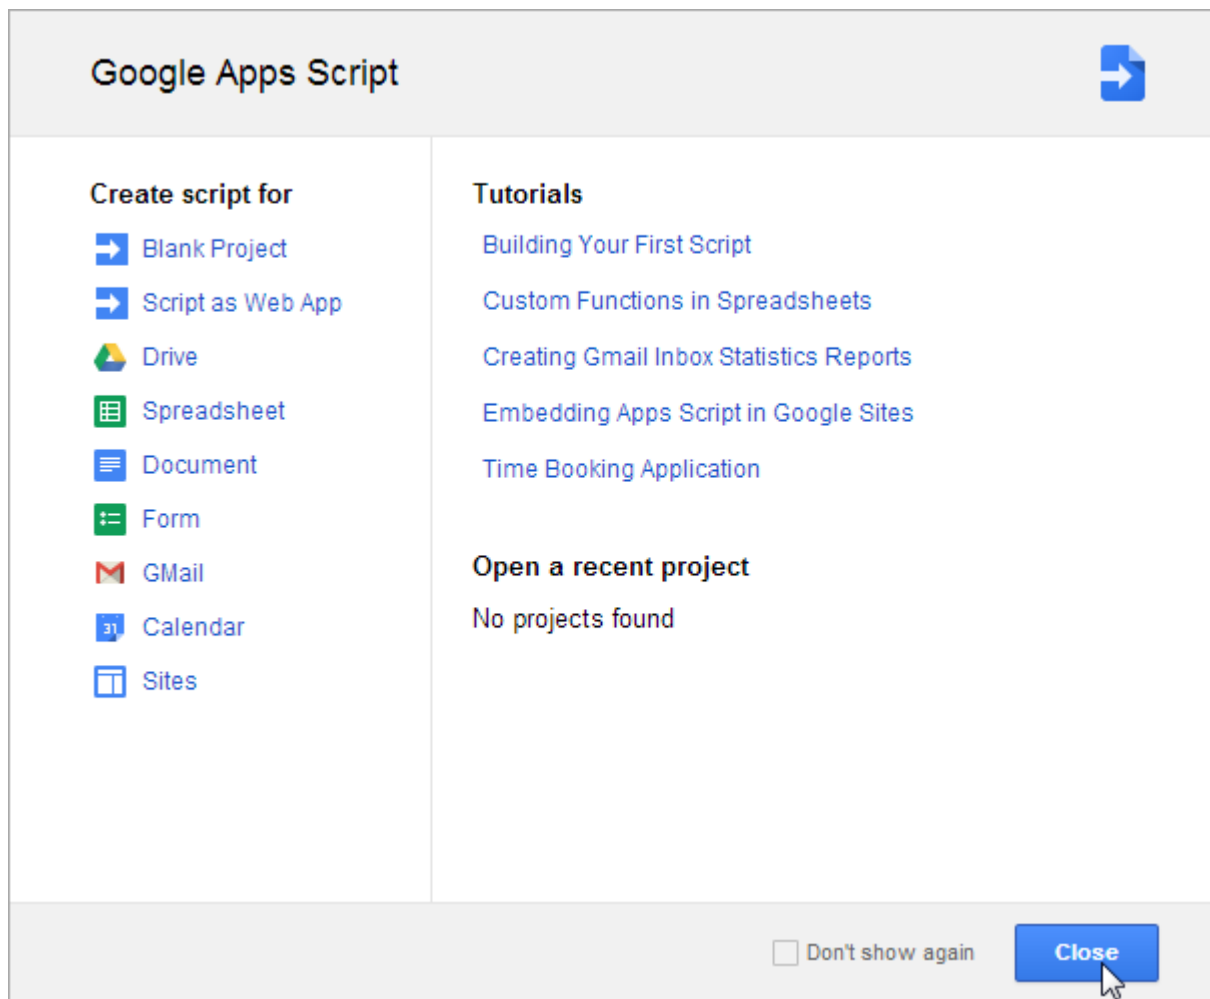

9. Give the spreadsheet a name, like **EVE Exploration**, and click on the **OK** button:

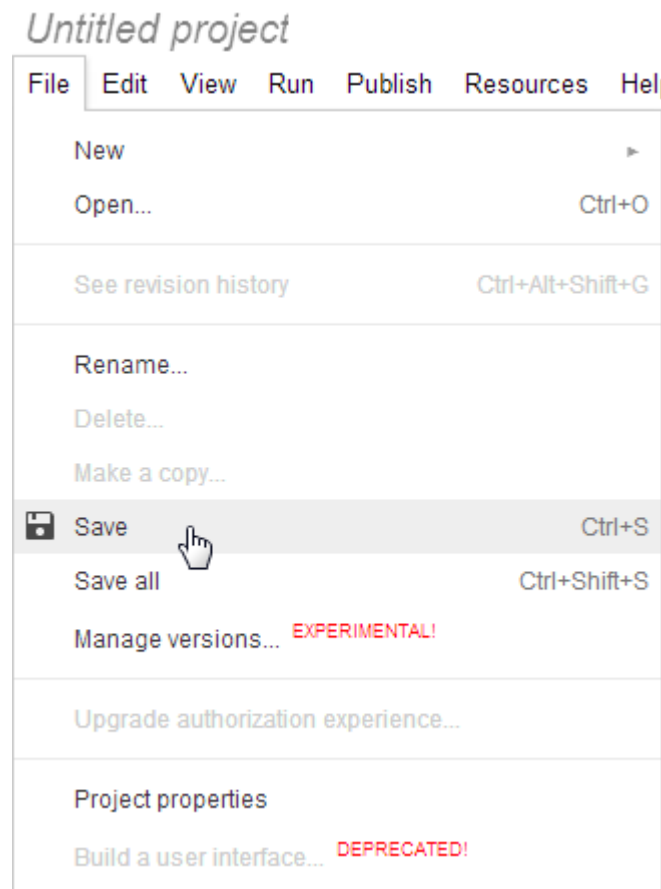

10. Now, choose **Tools → Script editor...** in the menu:

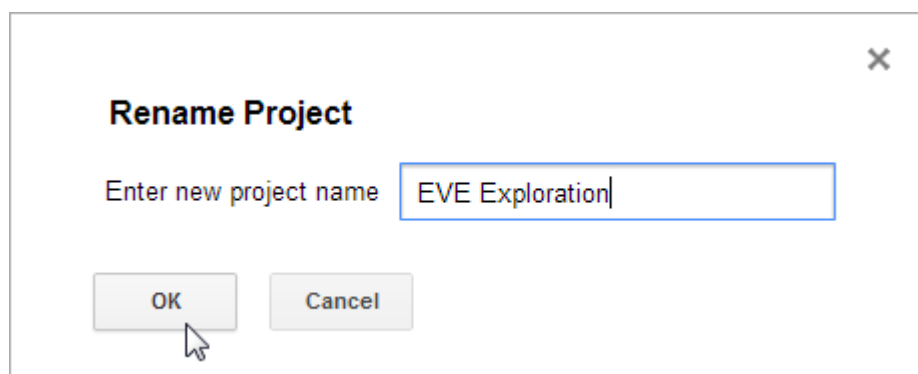

11. Click on the **Close** button in the window that pops up (if it pops up, otherwise just continue with the next step):

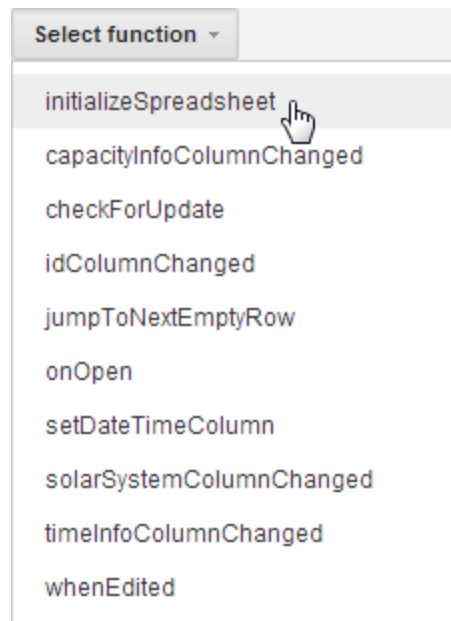

12. Open the file **EVE Exploration – Code.gs** somewhere on your hard drive, USB drive or whatever storage the file is on, in a text viewer or text editor, select all the text, copy it to the clipboard, go back to the browser window, select all the text in the Script editor, paste the text from the clipboard and choose **File → Save...** in the menu:

13. Give the project a name, like **EVE Exploration**, and click on the **OK** button:

14. Click on the **Select function** button and choose **initializeSpreadsheet**:

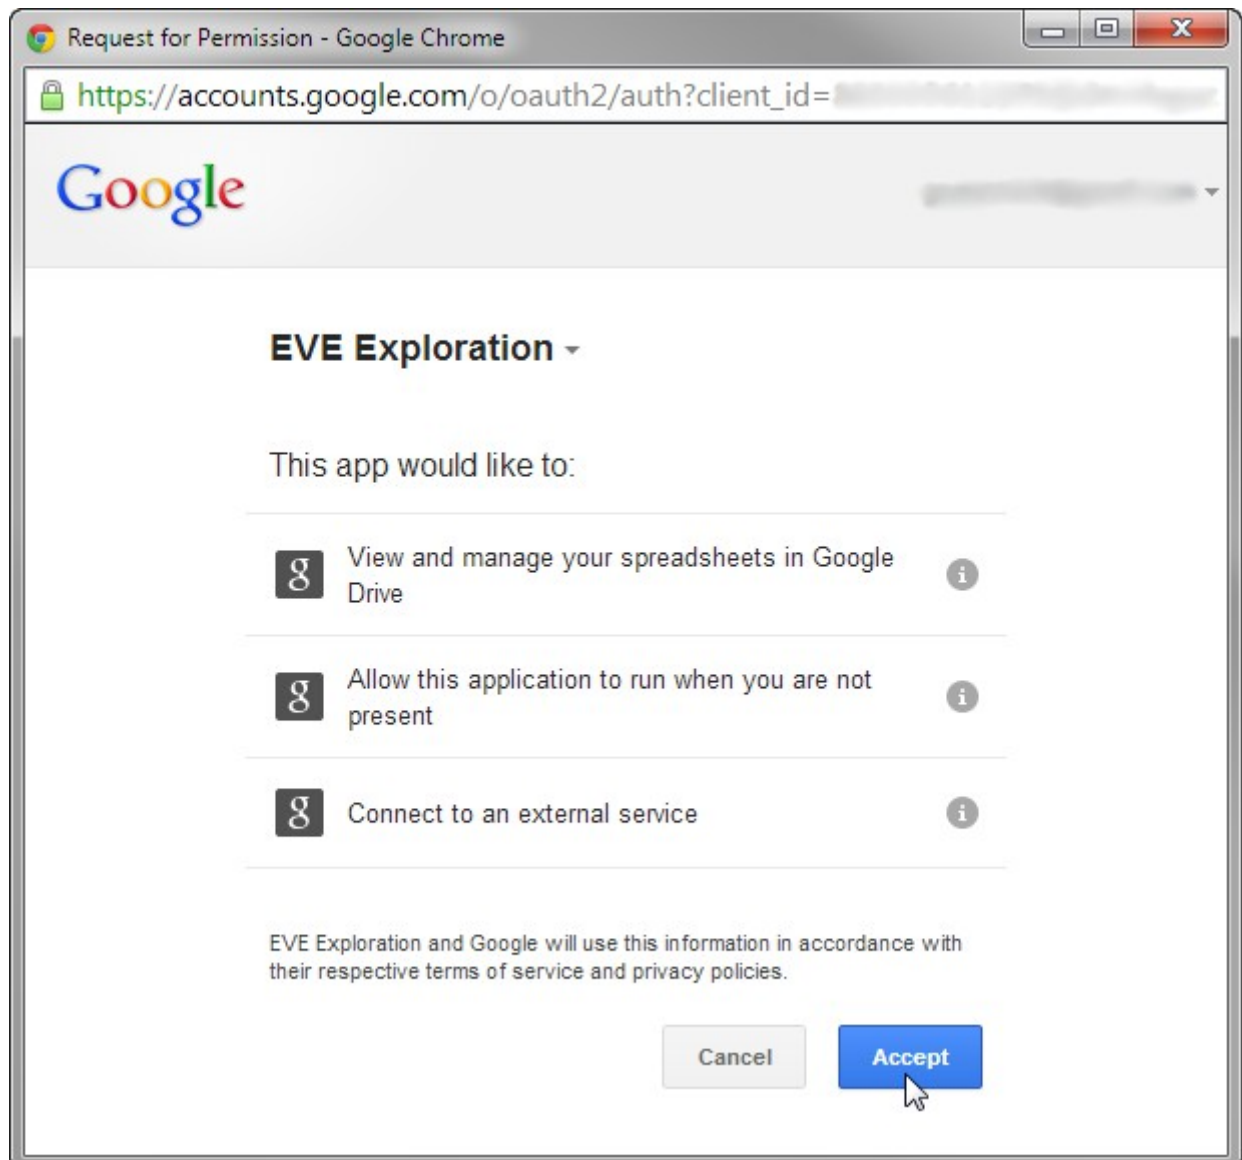

15. Click on the **Run** button just a little to the left:

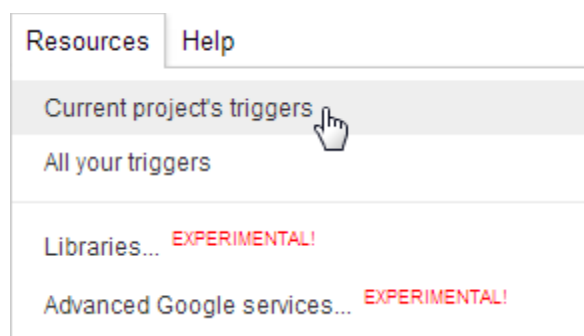

16. Click on the **Continue** button in the **Authorisation required** window that pops up:

17. In the **Request for Permission** window that pops up, click on the **Accept** button:

18. Wait for the script to run, then choose **Resources** → **Current project's triggers** in the menu:

19. In the window that pops up, click on **notifications** on the right:

Current project's triggers

Run	Events
onOpen	From spreadsheet On open
whenEdited	From spreadsheet On edit

[Add a new trigger](#)

[notifications](#)

[Add a new trigger](#)

Save Cancel

20. In the window that pops up, click on the **X** on the left:

Execution failure notifications

☐ via email at [dropdown] daily [dropdown] around midnight [dropdown]

[Add another](#)

OK Cancel

21. Click on the **OK** button:

Execution failure notifications

[No notifications set up. Click here to add one now.](#)

OK Cancel

22. Click on the **Save** button:

Current project's triggers

Run	Events
onOpen	From spreadsheet On open
whenEdited	From spreadsheet On edit

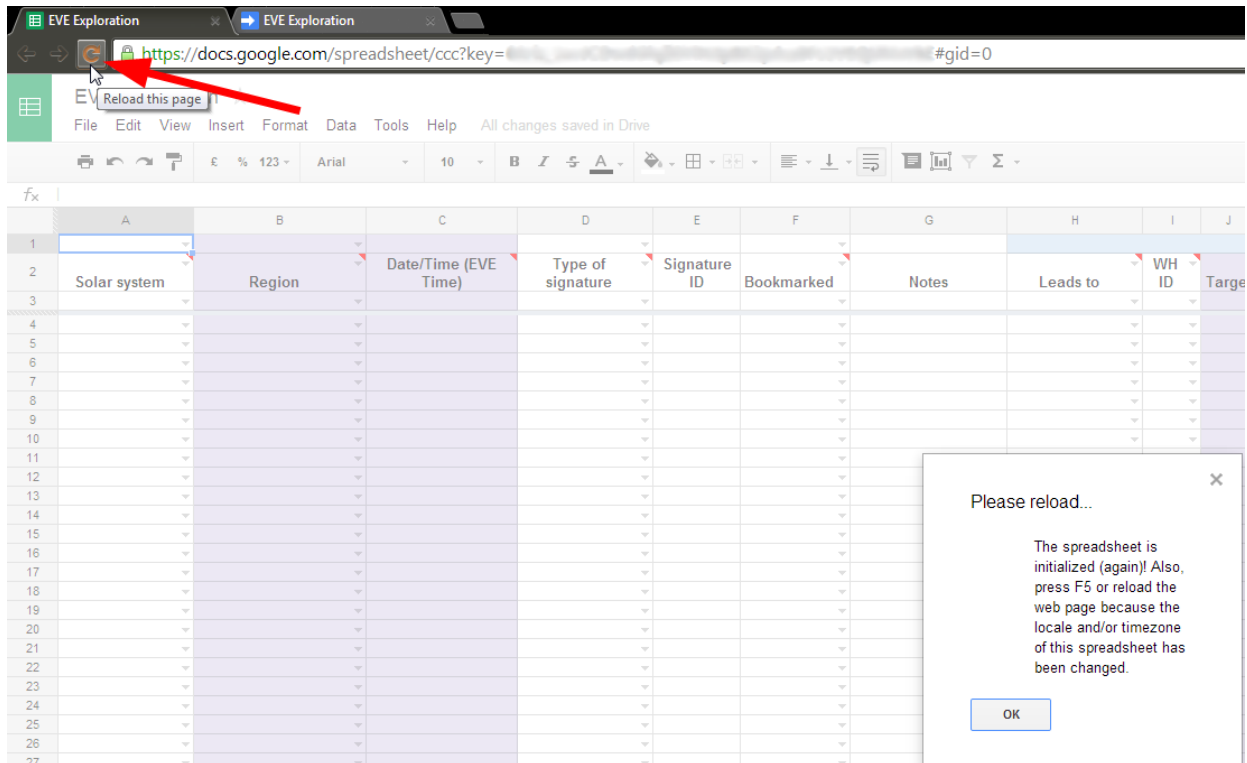

[Add a new trigger](#)

[notifications](#)

[Add a new trigger](#)

Save Cancel

23. Go to the tab with the Google spreadsheet open in it and reload the web page:

24. In the menu you'll see an extra entry to the right of **Help**, called **Spreadsheet**, with three menu items below it:

- **Jump to next empty row:** when your spreadsheet has lots of rows (which after a while will probably be the case), with this menu item you can easily jump to the next empty row, without having to scroll.
- **(Re-)initialize:** after adding new rows to your spreadsheet or updating to the latest version, just use this menu item to give those rows the right validation rules and formatting.
- **Check for update:** check for an update to this spreadsheet. If there is an update, you'll see a window popping up, telling you there is an update, where to get the update, what the version of the update is and the current version of your spreadsheet.

24. Done! You too can enjoy the awesomeness of this Google spreadsheet!
